TO OUR PATRONS

In presenting my annual catalog I wish to thank you for the liberal treatment with which you favored me the past year, and trust that our business dealings have been such as to warrant a continuance of your confidence. The season of 1926 has been a banner one for me as I had the good fortune of winning first prize at every Show where I exhibited the past season, for largest and best collection. Each year I grow nearly all of the new novelties in my Trial Garden, and I would be pleased to have you visit my gardens and see them when in bloom.

I also wish to thank you for the many letters sent me telling me of the fine results obtained from the stock I sent them, I would enjoy printing them all, but it would require too much space.

I make a specialty of growing Green Plants which will give fine results if given proper care, and are less liable to become diseased than tubers. Green Plants should be planted quite deep, 4 to 5 inches. Price of plants will be one-half that of tubers, unless otherwise stated.

Sincerely yours,

EDGAR W. DARLING

Gladioli

Choice Named Varieties of Gladioli

Our customers will note in this issue many new varieties that we have tried out in our gardens and found to be worthy acquisitions. It is our practice each year to obtain plantings of the newer creations in order that our many visitors may have the opportunity to view them while growing in our fields.

CARE AND CULTURE OF GLADIOLI

Do not plant too early, as nothing is gained by planting before the ground is warm. If your soil is heavy plant four inches deep, if light and sandy, six inches is better. Place the bulbs four to six inches apart. Place the bulbs in a well worked trench in zigzag rows, and cover at first about three inches, when shoots begin to appear, work balance of dirt into the trench.

At all times keep the soil loose. If exhibition blooms are wanted Sheep Manure or Fertilizer should be worked in around the plants when hoeing.

At the time flower spikes appear abundant watering is very beneficial. In the Fall dig the bulbs as soon as the leaves turn yellow. Cut stem off half an inch above bulb. Spread bulbs out in the sun and dry thoroughly before storing. Store in a cool dry cellar.
